

Samuele Bortolotti

PH.D. STUDENT IN COMPUTER SCIENCE

✉ samuele.bortolotti@unitn.it | 🏠 samuelebortolotti.github.io | 📧 samuelebortolotti | 🌐 samuele-bortolotti

Education

University of Trento

PH.D. IN COMPUTER SCIENCE

Trento, IT

Nov. 2023 - Current

- Supervised by Professor Andrea Passerini and Professor Stefano Teso

University of Trento

MASTER'S DEGREE IN COMPUTER SCIENCE

Trento, IT

Sept. 2021 - Oct. 2023

- **GPA:** 4.0/4.0
- **Grade:** 110/110 cum laude
- **Final dissertation:** "From Models to Arguments and Back", supervised by Professors Andrea Passerini and Stefano Teso

University of Trento

BACHELOR'S DEGREE IN COMPUTER SCIENCE

Trento, IT

Sept. 2018 - Jul. 2021

- **GPA:** 4.0/4.0
- **Grade:** 110/110 cum laude
- **Final dissertation:** "Analysis of user warnings in Wikipedia", supervised by professor Alberto Montresor

Work Experience

Structured Machine Learning Group

RESEARCH INTERN

Trento, IT

Nov. 2022 - Jun. 2023

- Work on a novel interactive multi-shot debugging protocol that allows the exchange of arguments between a machine and a user in order to correct the model's beliefs.
- Integrate state-of-the-art eXplainable Artificial Intelligence techniques, such as the 'Right for the Right Reasons' loss, into structured prediction output Neuro-Symbolic models like Coherent Hierarchical Multi-label Classification Networks and Semantic Probabilistic Layers.
- Successfully recover the performance of confounded models in the field of hierarchical classification.

Eurecat - Centre Tecnològic de Catalunya

JUNIOR DATA SCIENTIST

Barcelona, ES

May. 2021 - Jun. 2021

- Extract Wikipedia data from the Wikipedia dumps - 937GB bz2 and 157GB 7z compressed.
- Design an effective way to extract and analyze the languages spoken by the Wikipedia users - 109'452 database entries.
- Develop a strategy to retrieve Wikipedia users' User Warnings and Wikibreaks, studying how they affect the users' activity level - respectively 25'843 and 2'777'181 database entries.
- Build an automated pipeline to download the dumps, extract the data, and compute the statistics using Docker.

Alyso Srl

JUNIOR SOFTWARE DEVELOPER

Trento, IT

Jul. 2017 - Aug. 2017

- Create corporate libraries with the aim of handling database connections regardless of the database management system (SQLite, PostgreSQL, MySQL, and Oracle) in Java.
- Develop a Java-based internal software function that can calculate the distance between two buildings using GIS data.
- Develop a web application in HTML5, CSS3, and JavaScript to show the obtained results.

Social IT

JUNIOR SOFTWARE DEVELOPER

Trento, IT

Jun. 2016 - Jul. 2016

- Contribute to the development of an internal Customer Relationship Management System using Java, JavaScript, HTML5, CSS3, and MySQL.

Projects

UNIVERSITY

Particle Swarm Optimization-OpenMPI [code 📄][report 📄]

MEMBER

C, Python

Oct. 2022 - Dec. 2022

- Develop an efficient hybrid OpenMP-MPI algorithm to solve complex continuous optimization problems.
- Compare the developed program with state-of-the-art implementations.

DarkrAI: a Pareto epsilon-greedy policy [code ↗][report ↗]

Python

MEMBER

Apr. 2022 - Jul. 2022

- Train two ϵ -greedy reinforcement learning agents in the field of Pokémon battles.
- Compare the performances between classic deep Q-learning and an ϵ -greedy strategy which chooses Pareto optimal moves employing NSGA-II for the first part of the training.
- Conduct a quantitative analysis using the Wilcoxon Rank Sum Test on the obtained results, showing a significant improvement in the episode reward distribution for the proposed agent (p-value = 2.886e-12).

Multilevel Cache [code ↗][report ↗]

Java

TEAM LEADER

May. 2022 - Jul. 2022

- Develop a distributed architecture consisting of multiple caches, guaranteeing *client-centric consistency* in an environment, in which caches may fail by crashing.
- Communication between the caches occurs through message passing facilitated by the actor-based framework Akka.

UDA (Unsupervised Domain Adaptation) [code ↗]

Python

TEAM LEADER

Apr. 2022 - Jul. 2022

- Replicate and adapt a collection of methods concerning unsupervised domain adaptation techniques such as Deep Domain Confusion, Domain Adversarial Neural Networks, and Domain Separation Networks.
- Enhanced the Entropy Minimization vs. Diversity Maximization architecture, a state-of-the-art network for unsupervised domain adaptation, by integrating other approaches from the literature.
- Achieved a significant gain of 15.76 from product images to real-life and 2.86 from real-life to product images, thereby improving the ResNet18 baseline.

Neural PRNU Extractor [code ↗]

Python

TEAM LEADER

Nov. 2021 - Feb. 2022

- Develop a pipeline to perform noise extraction from a set of camera images and achieve camera identification using the estimated PRNU.
- Adapt a PRNU estimation algorithm [DOI] in order to deal with noise extracted by a neural network [CODE].
- The neural network is based on FFDNet which works with different noise levels and uses state-of-the-art convolutional neural network structures.

Skills

Programming

Python (proficient), Java (proficient), Ruby (intermediate), JavaScript (intermediate), TypeScript (intermediate), R (intermediate), C++ (intermediate), C (intermediate), C# (academic), Matlab (academic)

Miscellaneous

Linux, Git, GitHub, LaTeX, SQL

Languages

English (B2), Italian (native), German (A2)

Honors & Awards

- 2022 **Merit Grant**, Premio allo studio Marco Modena (Cassa Rurale Alto Garda - Rovereto, Trento, IT)
- 2023 **Ph.D. scholarship**, Three year sponsorship: rank 6th out of 120 participants

Trento, IT

Trento, IT
